

Naturally Leptin Signaling Complex™

Experience a proven *isoenergetic cell-signaling*™ leptin approach to promptly, effectively and safely curb appetite & control cravings – the key to satiety & weight control

Cell signaling is the language of hormones, growth factors, and other signaling proteins which the body uses to instruct cells how to function. The hormone leptin is referred to as our body's satiety (fullness) hormone and regulates pathways controlling cravings and metabolism, as well as directly modulates dopaminergic signaling.

Naturally Leptin Signaling Complex is formulated with leptin to control cravings, promote feeling full, reduce over-eating, and decrease the desire for excessive sugars and processed foods – which all cause an imbalanced allostatic state. Restore your body to healthy balanced homeostasis and experience the rewards of appetite and craving control for managing weight.

The anxiety pathway is directly affected by leptin signaling which makes it crucial for addressing issues such as stress-eating, as well as anxiety-affected sleep disorders, and PTSD.

Our proven *isoenergetic cell signaling*™ enables the body to circumvent leptin impedance (resistance) for correct leptin signaling in brain regions including the hippocampus and hypothalamus – the major center for appetite & craving control. Leptin even inhibits excessive sweet sensations/desires on the tongue.

Leptin resistance (LR) relates to the circulatory system and blood brain barrier (BBB) transport dysfunction. Our formula circumvents LR by utilizing the neuroenergetic system, not the circulatory system, to activate leptin cell receptor sites, including expression in the hypothalamus – appetite center of the brain, and the hippocampus – reward center of the brain – finally cravings can be controlled.

Case studies and over 5 years of use by doctors with their patients have proven that the *Naturally Leptin Signaling Complex* is safe and remarkably effective.

- * Decreased Cravings
- * Reduced Fat Mass
- * Greater Energy
- * Controlled Over-Eating
- * Improved Sleep
- * Decreased Anxiety

***Naturally Leptin Signaling Complex* works naturally with the body and can complement and enhance all weight loss and weight management protocols.**

- * No adverse side effects
- * Caffeine & stimulant free
- * Convenient oral spray
- * Non-prescription OTC
- * No botanicals, extracts or fillers.
- * Safe for children and elderly

Leptin is the basis for effective appetite control and weight management. Nothing is more effective than *Naturally Leptin Signaling Complex* to reduce cravings and over-eating.

- * Control eating urges
- * OCD eating behaviors
- * Balance hormones
- * Prevent yo-yo dieting
- * Reduce excess caloric consumption
- * Assists all weight loss & weight management protocols
- * Avoid weight gain when quitting smoking
- * Address symptoms of metabolic syndrome

Note: To measure reduction in fat – take your waist circumference measurement. Both hGH and leptin promote fat metabolism but also an increase in lean mass. Total weight does not reflect fat mass decrease as well as your waist circumference measurement or BMI.

Note: *Naturally Leptin Signaling Complex* has not been evaluated by the FDA, and we make no claims to treat, cure, manage, prevent or diagnose any disease.
